**Direction** (81-90): Read the following passage carefully and answer the questions given below it. Certain word/phrases are printed in **bold** to help you locate them while answering some of the questions.

Most of the world's healthcare is financed directly by governments, but private insurance, which now makes up nearly a fifth of the total. Looks set for a state sponsored boom in the hope of solving problems in national systems of helthcare which include inadequate access to care and soaring costs.

In most countries state financed healthcare is not available to all. So governments want private insurance to be expanded to **cover** everyone. The most prominent effort is underway in America, where about 47 million lack health insurance of any kind. This effort is similar to reforms undertaken over the past decade in the Netherlands and Switzerland. To ensure equitable access, both countries forbid private insurers from discriminating against, applicants because they are in poor health or at high risk of falling ill. This practice is known as "lemon dropping" A lightly regulated expansion of private insurance in effect turning health insurance into a utility - can thus expand coverage. This is also likely be true in developing countries. Whose public health care systems are often hopelessly over stretched and under funded, although because poor countries cannot afford the subsides and regulatory mechanism of the rich world, coverage is likely be **confined** to the better off.

The second reason why government have turned to private insurance is cost **control.** The hope was that by ruthlessly tackling costs and promoting efficiency, market-minded insurers would help rein in runaway health inflation where, governments could not. Whatever the role played in a health system, private health-insurance has added to total health expences. It is no coincidence, that the countries with the biggest private health-insurance sectors-America, France, Germany and Switzerland - also have some of the highest healthcare costs per person.

There are several explanations for this. Because a third party pays the bill, the

true cost of health services is rarely made clear to them. Nor is the true price of insurance, especially if coverage is provided through an employer. This encourages over-insurance and **over-consumption of healthcare**. Another incentive problem also arises from lack of transparent pricing. Studies have shown that the fees for similar procedures vary widely among hospitals in the same area. Because hospitals and doctors both decide on the services patients must have and dictate the price of those services, they often enjoy a powerful information advantage over insurers. Thus doctors and hospitals have an informational advantage and an incentive to over supply their services.

- **81.** Why do governments look to private insurers to reduce inflation in the health- care system?
  - A) Private health insurance companies are professionally managed.
  - B) It is in the interest of the private insurers to do so.
  - C) Their pricing system does not reveal the hidden costs in healthcare.
